PROFESSIONAL SUMMARY

Platform and Site Reliability Engineer with 14+ years running Linux, Kubernetes, and OpenStack infrastructure in enterprise production. Currently lead platform engineering for a multi-AZ OpenStack private cloud at IBM, sustaining a 99.9%+ SLA for enterprise workloads. Proven across telecom, ad-tech, and enterprise cloud: zero-downtime Kubernetes upgrades and migrations, Terraform-driven provisioning, P1/P2 incident response and root-cause analysis, and Prometheus/Grafana observability. Apply SLO-driven reliability practices, automate recurring toil with Python, Bash, and Go, and mentor engineers on production operations.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS, Azure, GCP, Hybrid/Multi-Cloud, Baremetal Infrastructure, OpenStack, Terraform, Infrastructure as Code, Compute, Networking, Storage, IAM

Containerization & Orchestration: Kubernetes, ArgoCD (GitOps), EKS, AKS, Container Platforms, Cluster Lifecycle Management, Upgrades, Scaling, Troubleshooting, CNI, CSI, RBAC, Operators, Workload Scheduling

Reliability & Observability: SLA/SLO/SLI Frameworks, Error Budgets, Production Monitoring, Prometheus, Grafana, Metrics, High Availability, Disaster Recovery

Systems Engineering & Automation: Bash/Shell, Linux/RHEL/CentOS, Kernel Tuning, TCP/IP, DNS, Load Balancers, HA Design, Security Hardening

Languages & Scripting: Python, Go, Bash

Databases & Storage: PostgreSQL, MySQL, MongoDB — Replication, Backup Validation, Performance Tuning

PROFESSIONAL EXPERIENCE

Senior Staff Engineer — Platform & Hybrid Cloud

Aug 2023 - Present

IBM Systems Development Labs, Bengaluru, India

- Lead platform engineering for an OpenStack private cloud spanning multiple AZs, ensuring 99.9%+ SLA for enterprise production workloads across compute, networking, storage, and identity services.
- Own end-to-end lifecycle management for Kubernetes clusters — deployments, upgrades, scaling, and troubleshooting — while working on operators and CLI utilities in Go to extend platform orchestration.
- Drive root-cause analysis and resolution for P1/P2 incidents across Linux, Kubernetes, OpenStack, storage, and virtualization layers, reducing recurring outages through automated remediation runbooks.
- Build infrastructure-as-code pipelines using Terraform, Python, and shell scripting, reducing environment provisioning time.
- Enforce security hardening standards across compute, network, and storage layers, reducing vulnerability surface area through automated compliance scanning.
- Administer PostgreSQL and MySQL databases for platform services, ensuring data integrity through backup validation, replication monitoring, and performance tuning.
- Mentor engineers through hands-on technical guidance, deep-dive troubleshooting sessions, and operational best practices.

Senior Tech Lead

Jul 2022 - Aug 2023

Sterlite Technologies, Bengaluru, India

- Managed production-grade Kubernetes clusters supporting carrier-grade telecom workloads across development, staging, and production environments.
- Deployed and administered container platforms managing CNI networking, CSI persistent storage, RBAC security policies, and workload scheduling for high-throughput applications.
- Automated infrastructure provisioning using Terraform for OpenStack and public cloud environments, reducing manual configuration errors and accelerating environment spin-up time.
- Implemented observability stack using Prometheus and Grafana, enabling proactive alerting and reducing mean time to detection (MTTD) for production anomalies.
- Mentored engineers on Kubernetes operations, container security, and cloud-native best practices.

Technical Specialist

Dec 2019 - Jul 2022

AT&T Xandr (acquired by Microsoft, 2022), Bengaluru, India

- Orchestrated Kubernetes cluster upgrades and migrations across on-premises and cloud environments, ensuring zero downtime for production ad-tech services.
- Scaled and managed high-availability Linux, Kubernetes and Azure infrastructure supporting mission-critical microservices with strict latency and throughput requirements.
- Administered PostgreSQL and MySQL databases, implementing replication topologies, query optimization, and automated backup strategies to ensure 99.95% uptime.
- Optimized cloud resource utilization through right sizing and reserved instance planning, delivering significant infrastructure cost savings while maintaining performance SLAs.

Lead — Cloud & IT Infrastructure

Jun 2017 - Dec 2019

Subex, Bengaluru, India

- Managed and optimized OpenStack, AWS, and Azure environments serving enterprise infrastructure workloads.
- Architected and executed large-scale migrations across multi-cloud environments, ensuring minimal downtime and zero data loss.
- Designed high-availability hybrid cloud infrastructure with disaster recovery capabilities, achieving RPO under 15 minutes and RTO under 1 hour for critical business services.
- Hardened cloud security posture through network segmentation, IAM policies, and encryption standards across multi-cloud deployments.

Senior Engineer

Sep 2011 - May 2017

Ericsson, Bengaluru, India

- Spearheaded the administration, optimization, and scaling of OSS-RC production telecom infrastructure and databases on Solaris and RHEL, consistently maintaining a 99.95% uptime.
- Managed the end-to-end deployment, patching, and complex upgrades of on-premises systems and multi-tier applications in high-availability (HA) architectures with zero user-facing disruption.
- Automated manual, repetitive deployment and environment configuration workflows via shell scripting, reducing operational toil.
- Executed critical P1 incident response, emergency patching, and cross-functional recovery workflows as part of a 24x7 Emergency Recovery Team under strict SLA timelines.
- Diagnosed and resolved complex OS-level performance bottlenecks, tuning kernel parameters and resource allocation to maximize efficiency for heavy database and application workloads.

Trainee System Administrator

Nov 2010 - Aug 2011

RCS Technologies

- Administered Linux and Solaris servers, handling installation, configuration, and proactive lifecycle maintenance.

Junior Business Analyst

Feb 2010 - Nov 2010

Genisys, India

- Gathered enterprise requirements for SAP, IBM, and storage solutions, translating complex data into targeted outreach strategies and cross-functional campaigns to optimize lead pipelines and B2B conversion rates.

SELECTED TECHNICAL PROJECTS

- 100 Days of Linux for DevOps — Hands-on challenge series covering 100+ Linux concepts for DevOps practitioners. github.com/eknatha/linux-100-devops-challenge
- DB Encyclopedia — Interactive reference for database concepts, queries, and optimization patterns. db.eknathalabs.com
- Linux Command Explainer — Web tool breaking down Linux commands with real-world examples and flags. linux-command-explainer.eknathalabs.com

CERTIFICATIONS

- Google Associate Cloud Engineer — Google Cloud
- Certified Kubernetes Administrator (CKA) — Cloud Native Computing Foundation (CNCF) [Renewal in Progress]
- Oracle Cloud Infrastructure Certified Foundations Associate — Oracle
- Red Hat Certified System Administrator (RHCSA) — Red Hat

EDUCATION

B.E. — Electronics & Communication Engineering

Visvesvaraya Technological University (VTU) 2008
